Category:MicrocontrollersQ: Issues with getting an Angular directive to work on a child element In a component, I have a table. In a table row I have a mat-select directive. Here's a reference to the row: Displayed columns: this.displayedColumns = ['id', 'name','registrationDate', 'ctype'] My mat-select directive: Basically what I'm trying to do is create a drop down list of firms. If they don't select a firm, the firm's default is displayed, else the selected firm's value is displayed. I keep getting an error in my console that says: Cannot read property 'firm' of undefined What is the proper way to accomplish this? A: You can accomplish this by using optionLabelPath as following. {{ firm.regName }} here is the working plunker. Q: How to build a HTML
