Add macros to all your favorite applications. KEYMACRO is an advanced GUI toolkit which enables any Windows application to automatically record any key combination you want, including any key combination you type. It allows you to assign commands to macros, and then to easily record all your desired keystrokes. This utility is very simple to use, and can be started by double-clicking on the program icon. There are two basic options: Recording and Macro. With the Recording option you can record keystrokes, mouse movements, and any other operation you select, starting the recording process as soon as the selected command is pressed. The Macro option allows you to define any number of operations that are triggered by one or more keys. For example, the Esc key will start and stop the recording, while the Ctrl+F5 key combination will do nothing at all. KEYMACRO also supports Auto record and free macros. The Record mode is activated by double-clicking on the main menu, while the Macro mode is activated by selecting the appropriate tab in the main menu. Both the main menu and each individual option tab are context-sensitive, so it is possible to edit a command at the first tab, and instantly have it reflected in the second tab. KEYMACRO is suitable for all Windows versions and for both 32-bit and 64-bit versions. KEYMACRO includes support for all mainstream Windows applications, and offers the following additional features: • Macros can be defined in any application • Switching between applications using Alt+Tab • Switching between application windows using Ctrl+Tab • Modifying or deleting the selected macro • Redefining the Macro • Retrieving the currently recorded macros • Simple saving and loading options • Program icon is context-sensitive, allowing you to run the program as soon as it is clicked • Advanced options that allow you to start the program automatically when you log on, or run it manually when you want to start the program • Options to filter recorded macros • Options to start a macro immediately after each recorded keystroke KEYMACRO is fully customizable, allowing you to run the program at any time you like and without the need for any registration. It comes packed with two options: Start automatically on logon and Start automatically when you click the program icon. KEYMACRO is a freeware utility that does not place any limitations on use. Puran Disk Cleaner Crack

Puran Disk Cleaner is a simple-to-use application designed to automatically find and eliminate junk files from selected drives, in order to free up space on the hard disk. It comes packed with an intuitive set of options that can be adjusted by all types of users, even the ones with little or no previous experience in software utilities. Installing Puran Disk Cleaner is done in no time and does not impose any difficulties. Its interface is based on a regular window split into two panels, for selecting the target drives and viewing results, respectively. The list of partitions shows their file system, total and free space. You can select one or more of them, as well as create an inclusion or exclusion list. The scanning procedure is started with the click of a button. The results list shows the name, full path and size of each file prone to deletion. It is possible to delete all of them or just the selected items. There are no other notable options available in this program. Puran Disk Cleaner requires a moderate quantity of CPU and RAM to scan for and delete items. This may take a while, depending on the size of the hard drive and files selected for deletion. The tool can be minimized to the taskbar, as to not disrupt normal user activity. Unfortunately, it required more than one scan to delete junk files during our evaluation. Plus, the app does not show what kind of objects it's looking for. Other than that, we have not come across any issues, since Puran Disk Cleaner did not hang, crash or pop up error dialogs. All in all, this software utility serves its purpose.
